

Everything you need to know about

TPMS

TPMS IS YOUR TIRE'S DISTRESS SIGNAL

TPMS keeps you and your passengers safe by continuously monitoring your vehicle's tire pressure and notifies you if a tire pressure falls 25% below the recommended inflation.

This information gives you the opportunity to take action and fix the problem before a potential blowout or flat tire situation takes place.

TPMS LIGHT INDICATOR

SOLID LIGHT

If your TPMS light comes on and stays solid, it indicates that one or more tires have low air pressure. Some vehicles provide a visual representation of each tire's pressure and may or may not include the TPMS symbol.

FLASHING LIGHT

If your TPMS light comes on and flashes for 60-90 seconds before staying solid, it indicates a system malfunction.

HOW DIRECT TPMS WORKS

TPMS sensors are installed in each wheel and send pressure information to a receiver located in your vehicle. When the system detects low tire pressure or a malfunction, it causes the TPMS indicator light to appear on your dashboard.

TPMS SAVES YOU MONEY!

Not only can underinflated tires reduce the life of your tires, it can also cost you at the pump! Properly inflated tires save the typical passenger car 9.32 gallons of fuel, every year. (NHTSA)

TPMS KEEPS YOU SAFE!

Approximately 250,000 vehicle crashes are caused by underinflated tires each year, nearly 700 crashes every day! (NHTSA)

TPMS HELPS YOUR CAR PERFORM!

Proper tire pressure improves the way rubber meets the road by optimizing traction, handling, steering, stability, braking and even the life of your tires.

TPMS REDUCES CO₂ EMISSIONS!

Properly inflated tires reduce gas mileage. The gallons you save will translate to reduced carbon emission!
