

# Schrader TPMS Retrofit Kits

Designed for use on passenger vehicles and light trucks built prior to MY 2008 without factory installed TPMS.

**SCH-WRK-4PC**  
Wired Display

**SCH-BRK-4PC**  
Wireless Display

**System detects and warns of tire under-inflation of 25 percent or more while it monitors and displays pressure and temperature of all four tires and spare (with additional sensor, sold separately).**

*Ideal for off-road applications where tire pressure requirements are different than placard pressure.*

## The many benefits of properly inflated tires include:

- ▶ Improved fuel economy
- ▶ Decreased tire wear
- ▶ Improved vehicle handling
- ▶ Reduced braking distances
- ▶ A lower the risk of hydroplaning

## Tire pressure monitoring system kit includes:

- ▶ Dash-mounted receiver/display capable of monitoring full-size spare tire (fifth sensor sold separately)
- ▶ Four wheel-mounted transmitters
- ▶ Installation Instructions
- ▶ TPMS Kit for passenger cars and light trucks with .453" rim hole
- ▶ Wired or battery-operated display.

*Specifications subject to change without notice. Units may not be exactly as pictured.*

"Proper tire inflation is essential for safe and efficient vehicle operation. Safety experts estimate that 25 percent of passenger vehicles are operated with tires that are under inflated. Vehicles with properly inflated tires experience optimum ride and handling characteristics, shorter braking distances, longer tire life, and improved fuel economy."
